Cedar, I don't foresee any problems with sampling on the Horsepasture. As Erik mentioned, accessing through Gorges State Park will be important since the private property near Hwy 281 is a highly guarded no trespassing zone. Thanks for helping us gather important information on water quality.

Great, thanks guys for getting this to the right people.

Dave and Jeff, what Erik described is all correct, but let me know if you have any questions or need any other documentation.

Thanks,

Cedar

Hi all,

My name is Cedar, I'm with Adventure Scientists and wanted to get in touch with a question about our Wild and Scenic Rivers water quality project. Jordan Garrett recently left the organization, so I'm now responsible for communications related to permission and access for this project.

I see from our internal notes that we have the go ahead to sample on the Chattooga River within Nantahala, but I wanted to check about Horsepasture River. Any issue with sampling there as well?

Thanks for your help,

Cedar
